NCGC Scaffold Activity Diagram Cracked Accounts is a highly interactive tool that enables you to explore and visually explore the structure activity relationship of chemical compounds. The program visualizes scaffolds, that are the main structural features of chemical compounds. While exploring the structure activity relationship of the compound

---

it will detect the important scaffolds. The tool will help you to discover and explore different scaffolds of the compound. You can customize the program so that you can save your favorite scaffolds in order to explore them later. You can hide scaffolds or add new elements to the diagram. When you add a new scaffold, it will not replace an existing scaffold, it will only appear as a new element. The scaffolds will be drawn in a dynamic and interactive way. The

---

colored spots are considered as the atoms of the scaffolds. Important: the program can only detect scaffolds of chemical compounds that are taken from PubChem ( NCGC Scaffold Activity Diagram version: NCGC Scaffold Activity Diagram (version 0.1) Publisher: Iniva License: GNU Public License NCGC Scaffold Activity Diagram is a tool for visualizing the scaffolds of chemical compounds and was made by Iniva. ## NCGC Scaffold Activity Diagram

NCGC Scaffold Activity Diagram (NCGC-SDAD) is a CADD GUI for chemical library exploration. The purpose of the tool is to visualize and annotate the most relevant scaffolds in the compounds and vice versa. The analysis of scaffolds can be done through a number of inputs such as molecular structure, molecular weight, number of heavy atoms or druglikeness. NCGC-SDAD

---

offers a wide range of scaffolds, including SAR (Structure-Activity Relationship) that will be displayed through a diagram (SAR diagram). NCGC-SDAD also allows you to browse through the structure activity relationship. By using the type of the compound, you can filter the activity of the molecules based on their molecular structure (for example, only display the activity for compounds that contain a certain scaffold) or

---

link to the MarvinSketch application. NCGC-SDAD is capable of handling multiple molecular structures (e.g. the molecular structure of the compound can be imported from MarvinSketch and exported to MarvinSketch). The software can also handle compound properties such as their molecular weight or the number of heavy atoms. NCGC-SDAD can be used as a standalone tool or as a plugin to the MarvinSketch application. The user can also

---

create new scaffolds and export the results to either a VCF or a MOL format.
