If you are one of the many people who like to take pictures of all their hobbies, activities, and interests, this is the right application for you. It's called "PicWiz." It's a small program that allows you to convert ordinary pictures into color slide show slides. PictureWiz is a fun program for people who like to snap pictures of all the interesting things they see, with the ultimate goal of having fun with the pictures later. The program is very simple to use and you can get to know it in just a few minutes. It does most of the work automatically. You don't have to do anything but double click the files you want to "convert" and the program will do the rest. It gives you three options on how to handle the photo files. You can make them into slides: If you just want a simple collection of slides, you may want to make them into normal pictures and then make slide show pictures from these. You don't have to do anything other than select the picture file and click Start. You can also select individual pictures and make a picture show out of them. If you want to create a picture show with pictures of all kinds of your interests and hobbies, this is the right program for you. There are more options than just the ones listed, for a complete list of features go to the Help file by clicking Help/About. Saving the pictures as a slide show can be done in many different ways, and you can save your own templates or use the templates supplied. You can add effects such as cool or muted slide transitions, shadow effects, and special frames. Screencapture is a good screen capture program. It can capture Screen, Normal display, etc. You can set the capturing mode for left, right, top, bottom, and corner of the screen. You can also capture full display or part of it. You can also set hotkeys for capturing pictures, and you can go on capturing pictures with time interval (from 1m to 1 hour) by pushing the hotkey for a while. Screencapture is a simple to use. You just click the capturing button on the top right of the Window, and the screen capturing will be started. ----- This application is designed to help you understand how electrochemical cells work. You can perform an experiment using cells that you simulate using electrochemical cells pro. The simulation shows an electrochemical cell, where the left side shows the cathode. The right side shows the anode, the pH in solution, and the concentration of the salt. Each of these elements has a color. Each cell component that is added to the cell changes the simulation in some way. For example, the current flow, the temperature, the pH, and the concentration of salt. There are simple and advanced editing options. Cells can be moved to other cells and others can be moved to the cells. Cells can be added or removed. Electrochemical Cells Pro Features: ----- There are many features of Electrochemical Cells Pro. For example, choose a cell, or cells, and press it. When a cell is selected you can click on one of the components to add or subtract some of it. If a cell has multiple parts, one can be selected. If a cell's size changes, the program remembers the cells size before and after the size change and updates the simulation. If a cell has multiple pH, a solution can be chosen for each pH. The simulation can be run in two modes. In the first mode the simulator uses the pH and salt to find the concentration of acid and base. In the second mode, the pH changes so the simulation determines the concentration of acid and base. Two indicators can be used, one shows if a cell is oxidizing, if it is net oxidizing the word "oxidizing" appears on that color, if it is reducing "reducing" appears on that color. The simulation can show the direction of the electron flow (anode or cathode). It shows which electrode is the anode or cathode. With the simulation, you can change the numerical value of the pH and the salt concentration. This feature helps to understand these elements. A cell can be printed if you press print cell. You can click on a cell to display this option. If you perform one of the experiments that is presented in the program, you can save the simulation and then open the simulation in the next time you start the program. If you are missing a simulation you can press the button to add one. If you press an experiment button, the program will ask you which simulation you want to use. The program will not delete the previously created simulations

Electrochemical Cells Pro is a free, open source, Windows based educational application that teaches you about the properties of electrical cells. Electrochemical Cells Pro is unique in that it helps you build a virtual electrochemical cell. Simulations can be created and displayed in the same way you would create them using a real electrochemical cell. The simulation then provides all the information about which electrode reactions are taking place. Electrochemical Cells Pro is a free, open source, Windows based program. It is a collection of small applications that allow you to learn about electrochemistry. All the applications can be run independently and no knowledge of other applications is required. Electrochemical Cells Pro uses C#, DirectX and OpenGL graphics techniques. Electrochemical Cells Pro Supports: Oxidation and Reduction Cell Voltage, direction of electron flow, which electrode is anode or cathode Positive and negative half-equations Add new cells or edit ones that are already prepared Create cells from half-equations A: I don't know if it can be used to balance half-equations. But it gives an idea of the scope of the application for electrochemistry. Additional features: can add new cells can edit ones that are already prepared Extra Features: Ability to draw the current-voltage curve to understand the nature of the cell Ability to generate graph of the reaction Ability to plot the half-equation Ability to draw the cell at different conditions Screenshot: Programming Language: C#, DirectX, OpenGL License: Free Source Code: Confidence is declining in the United States, particularly among young people, as they face an uncertain future for the economy, for their homes and for their country, according to a major new poll. The Pew Research Center's survey of more than 30,000 adults found that 78 percent of people 18 to 29 felt "completely certain" that the U.S. economy would fail in the next year. This is the highest percentage in a Pew survey in which respondents answered that way since 2004. Almost all, 93 percent, also believed the country was on the wrong track. The decline in confidence among young people represents an important risk for the country, considering that many of them will assume the mantle of family and community responsibility in coming years. "The lack of faith in the economy, a lack of confidence that the government can do
